

# HDC – HGP- Assignment 02

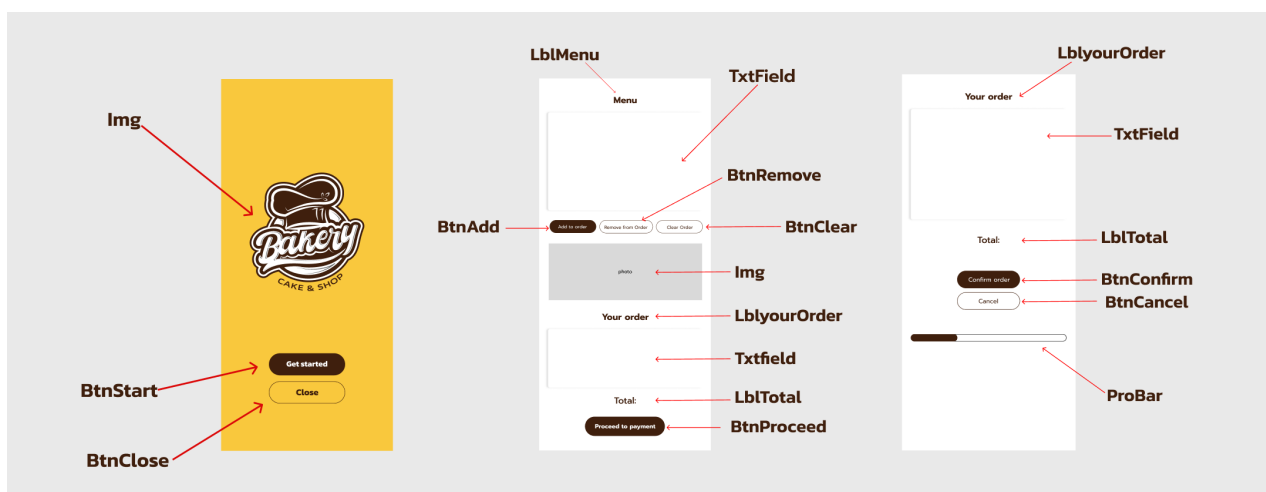

## BakeryFX

### UI Design Document

#### Instructions

I made the mobile wireframe because it's convenient to use and currently whole applications made for mobiles. I used VBox container to make everything a vertical column on top of each other.

Here the wireframe labeled on screenshots.

I placed the buttons in the first page on the center of the page, because it's convenient to tap and continue to use the application.

In the second page – Order Page, here I placed the list menu and buttons as: Add to Order, Remove the order, Clear Order. I placed them in the center and under the menu list because it's easy to use and tap for user. As user will tap on the item in the menu, the image will appear under. And the under the image user can see the list of order, and the total price in the bottom.

Color: I used these colors because they suitable for the Bakery application.

Brown color associates with coffee, chocolate.

Yellow color associates with food, and also, it calls the clients appetite.

White color: here as basic color

Size: Width: 500

Height: 900

## **Extra Feature:**

I made the extra window as Welcome Window, where client could choose to go and order from this coffee shop or CANCEL.

I made it my extra feature because, in my opinion every app has to have the welcome page and user will recognize the app by their logotype, color which will appear in the first page.
